

Money Moves in Silence.

Private messaging for Solana wallets
and Seeker IDs.

Solana discovers the recipient.
cMix carries the private conversation.

Android 10+ · Solana Mainnet · Hackathon Beta

Solana has identities. Private chat still needs an endpoint.

Solana wallets and Seeker IDs are portable public identities — but they are not private messaging endpoints.

Wallet

A portable public identity for transactions and ownership.

Seeker ID

A human-readable name for that wallet.

Missing layer

A discoverable private messaging endpoint that keeps content off-chain.

Users should be able to start a private conversation from the identity they already have.

Discovery and messaging take different paths.

SOLANA MAINNET — DISCOVERY

x0d.skr → Solana wallet → MMIS Registry → xx messaging endpoint

Public endpoint association · Wallet-authorized updates · Read-only discovery

xxDK / cMix — MESSAGING

Sender phone → cMix network → Recipient phone

Off-chain transport · Separate messaging identity

No Solana transaction is required to send a message

Discovery is public. Conversation content stays off-chain.

Wallet-to-endpoint associations are public and historically observable.

A native Solana Mobile messenger

Addressing

.skr / Seeker ID
Solana wallet
Direct sp1_ private address
QR sharing and scanning

Mobile

Native Kotlin /
Jetpack Compose
Android 10+
Mobile Wallet Adapter
Foreground message banners
Local contacts and aliases
Conversation history

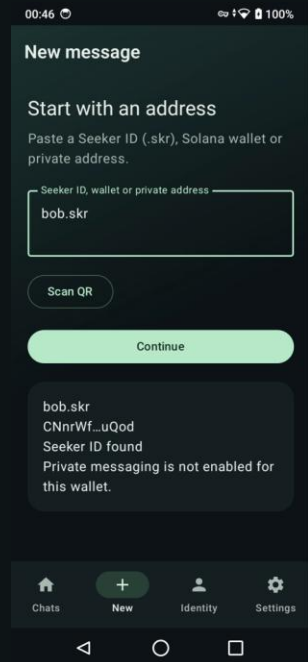

Production foundation

Solana Mainnet registry v1
Production signing
Digital Asset Links
Encrypted identity + history
backup / restore
Physical Seeker validation

One APK. Mainnet discovery. Native cMix messaging.

Proven on physical Android devices

1 — Negative lookup

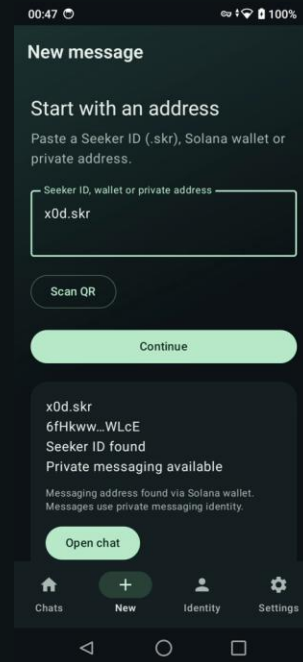

bob.skr

Seeker ID exists;
no MMIS endpoint
is registered.

Name found ≠
messaging enabled

2 — Positive lookup

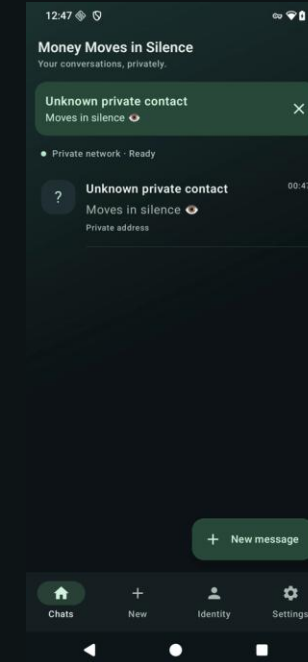

x0d.skr

Seeker ID → wallet
→ Mainnet
endpoint

Private messaging
available

3 — Real conversation

cMix message sent
Banner on Seeker
Reply returned
Local alias: Alice

Message content
stays off Solana

Real send. Real receive. Real reply.

No wallet transaction required for messaging. Full exchange: demo video (2:50).

Live on Solana Mainnet

Current beta status

Physical Seeker validated
Production MWA + DAL
Android 10+
Mainnet discovery
Real cMix send / receive / reply

Solana discovers. cMix carries the conversation.

Foreground notifications only. Sends can occasionally time out or arrive late.
“Sent to network” is not a delivery/read receipt.
Security follow-up: Audit findings remediated or documented in the public repository ·
threat model and audit response available on GitHub.
